

Video Panel

Do you need the Video widget or Embed widget?

```
<iframe t 1 src="http://www.youtube.com/embed/c-aFuyP3300" frameborder="0" allowfullscreen></iframe>
```

If the embed code for a video starts with `<iframe>` you should use the embed widget. If the embed code starts with `<object>` use the video widget.

Supported sites

Supported video sites include YouTube, Vimeo, Facebook, UStream live video feeds, MetaCafe, Veoh, Blip.TV, Google.

Get the embed code from YouTube

The screenshot shows the YouTube video player interface. At the top, there are buttons for Like, Add to, Share, and Embed (1). The Embed button is circled in red. To the right, it shows 37 views. Below the buttons is a text area containing the embed code (4), which is also circled in red. Below the text area are several checkboxes: Include related videos, Enable privacy-enhanced mode, Play in HD, and Use old embed code (2), which is checked and circled in red. At the bottom, there are five size selection options: 560 x 340, 640 x 385 (3), 853 x 505, 1280 x 745, and Custom. The 640 x 385 option is selected and circled in red. The Custom option has input fields for Width and Height in pixels.

Click the **Embed button (1)** and select the **Use old embed code button (2)**. Select a size (3) and then copy the code (4).

Paste Embed Code from YouTube or other videos sources

The screenshot shows the Video widget settings panel. At the top, there are tabs for SETTINGS and CSS. Below the tabs is the Video widget title. Underneath is the Embed Code field, which contains the following code:

```
<object width="640" height="385"><param name="movie" value="http://www.youtube.com/v/7B0hDaJH0m4&hl=en_GB&fs=1"></param><param name="allowFullScreen" value="true"></param><param name="allowscriptaccess" value="always"></param></object>
```

Supported video sites include YouTube, Vimeo, Facebook, UStream live video feeds, MetaCafe, Veoh, Blip.TV, Google.
